Golden Pangolin

Admin Manual — On Your Phone

A pocket-sized guide to managing Golden Pangolin from your phone — logging in, finding the menu, working with the simplified mobile views, and getting everything done with one thumb.

Version	1.0
Audience	Admins using a phone or small tablet
Companion to	Golden Pangolin Admin Manual (desktop)
Last updated	May 2026

What's inside

1. Before you start
2. Logging in on your phone
3. The hamburger menu (your main navigation)
4. Reading the lists
5. Adding photos
6. Forms that look long — how to fill them quickly
7. Drag-and-drop reordering on a touchscreen
8. Flash messages and confirmations
9. Common mobile tasks, step by step
10. Tips for working faster
11. Troubleshooting

1. Before you start

Everything in the admin works on a phone — you don't need a laptop. The site automatically reshuffles itself when it sees a small screen, hiding things you don't need and giving you bigger taps for the things you do.

You'll have the best experience if:

- Your phone is on a recent version of **Chrome**, **Safari**, or **Edge**.
- You're on a reasonable internet connection (the admin works on slow networks, but uploads need a few seconds).
- Your phone's screen rotation is on so you can briefly turn landscape to see more on lists if needed.

> **Tip:** Save the admin URL to your phone's home screen. In Safari and Chrome, use the Share menu → **Add to Home Screen**. It launches like an app.

2. Logging in on your phone

- Open your phone's browser and go to **goldenpangolin.com/login**.
- Type your email and password.
- Tap **Log in**.
- If a one-time code is sent to your email, switch to your email app, copy the code, come back, and paste it.

After a successful login you'll land on the dashboard with the welcome banner and stat tiles. The full admin lives behind the hamburger menu in the top-right.

3. The hamburger menu (your main navigation)

On a phone, the sidebar from the desktop view is gone — replaced by a tidy hamburger menu. Look for the three short horizontal lines (≡) in the top-right corner.

Tap it and you'll see:

- **Main** — Dashboard, Users (admin only), Settings (admin only).
- **Content** — Destinations, Activities, Packages, Accommodations, Accommodation Types, Categories, Blog Posts.
- **Trash** — restore or permanently delete things.
- **Account** — View Site, My Profile, Logout.

Three things to know:

- **Tap any item** to navigate.
- **Tap outside the menu** to close it without going anywhere.

- **The page you're on** is highlighted in soft gold so you always know where you are.

> **If the hamburger disappears** — you're probably on a desktop or tablet wide enough to switch back to the sidebar layout. Rotate to portrait or shrink the window and the hamburger comes back.

4. Reading the lists

Lists (Destinations, Packages, Activities, Accommodation, Blog Posts, etc.) are long on desktop. On your phone, the admin **hides everything except the essentials** so you can tap without scrolling sideways:

- **Grip handle** on the left — for drag-and-drop reordering.
- **Name / Title** — the main label, with a short description underneath.
- **Actions** on the right — the edit (✏) and delete (🗑) buttons.

All the other columns (image thumbnail, country, price, type, active/featured status, etc.) are **still saved in the database**; they're just not shown on a phone to keep the list readable. To see them, view the same list on a desktop or rotate your phone to landscape on a larger device.

To edit an item: tap the pencil icon on its row.

To delete: tap the trash icon. You'll be asked to confirm. Deleted items go to Trash, not gone forever.

5. Adding photos

When you're adding an activity, package, accommodation, or blog post, look for the **photo picker** — a cream box with an upload-cloud icon that says *"Tap to add photos"*.

On a phone:

- **Tap the box.** Your phone offers **Photo Library**, **Take Photo**, or **Choose Files**.
- **Pick one or several photos.** They appear as thumbnails right below the box.
- **The first photo becomes the cover** — you'll see a gold **COVER** badge on it.
- **Don't like one?** Tap the small **×** on its corner to remove it (the rest stay).
- **Want more?** Tap the box again. The new ones get added to the existing selection — they don't replace.
- **Tap Save** when you're done. The site automatically shrinks each photo so it loads fast for visitors.

> **Phone photos are perfect.** A regular phone photo (2-5 MB) is well within the limits. The site auto-compresses everything down to ~300 KB once uploaded — you don't need to resize manually.

6. Forms that look long — how to fill them quickly

Some forms (especially Activities and Packages) have many fields. On a phone they're stacked vertically, which makes them look long — but each field is full width and easy to tap.

A few field types to know:

Pricing modes

Tap one of the four cards: **Fixed**, **Free**, **Tiered**, or **From…**. The fields below the cards automatically change to match your choice — you only fill in what's relevant. If you change your mind, tap a different card.

Tier availability (Packages)

Three checkboxes: Local, Regional, International. All three start ticked. Untick a group to hide the package from those visitors. If the hero package isn't offered to the current visitor's tier, the site automatically picks a different one for them.

Park fee toggle

Just leave the box unticked if there's no extra fee. Tick it to reveal a dollar input and enter the amount — e.g. Victoria Falls park entry, conservation levy, boat launch.

Multi-select rows (destinations / activities for a Package)

Tap **+ Add Destination** or **+ Add Activity** to add a row. Each row is its own dropdown. Tap **Remove** on any row to take it out.

7. Drag-and-drop reordering on a touchscreen

Most lists support drag-and-drop reordering. On a phone:

- Tap and **hold** the grip icon on the left of any row (the small dots-grid).
- **Drag** the row up or down. Other rows shift to make room.
- **Lift your finger** to drop. The new order saves automatically — no Save button needed.

> **Phones can be fiddly with drag & drop.** If you're struggling, the same lists are reorderable on a desktop where it's easier. The order you set anywhere applies to the public site immediately.

8. Flash messages and confirmations

When you save something, a small white pill slides in from the top of the screen for a few seconds:

- **Green check** — the save worked.
- **Red cross** — something went wrong; the message tells you what.

These auto-dismiss after about 3.5 seconds. You can also tap the small **×** on them to close them yourself.

9. Common mobile tasks, step by step

Add a new destination

- Tap the hamburger → **Destinations**.
- Tap **+ Add New Destination** at the top.
- Fill in **Title**, **Country**, **Description**.
- Tap the photo picker box and pick a main image from your phone.
- Tap **Create**.

Add a new activity (with locals-free pricing)

- Hamburger → **Activities** → **+ Add new**.
- Fill in the basics — name, destination, duration.
- Tap the **Tiered** pricing card.
- Type **0** in Local, type the price in Regional and International.
- Tick the park fee checkbox only if there's one, and enter the amount.
- Add up to 3 photos with the picker.
- Tap **Create Activity**.

Move a package to the homepage hero

- Hamburger → **Packages**.
- Tap the pencil on the package you want to feature.
- Tick **Show this package on the homepage hero**.
- Tap **Update Package**. Any previous hero is automatically un-set.

Delete and recover a blog post

- Hamburger → **Blog Posts**.
- Tap the trash icon on the post. Confirm.
- Changed your mind? Hamburger → **Trash**.
- Find the post and tap **Restore**.

10. Tips for working faster

- **Add the admin to your home screen** for instant access (Share menu → Add to Home Screen).
- **Pull down to refresh** any list page if you've just changed something elsewhere and want fresh data.
- **Use voice-to-text** in your phone keyboard to dictate long descriptions and blog content.

- **Edit one thing at a time** on a phone — it's quicker than trying to do big batch changes on a small screen. For lots of edits at once, switch to a desktop.
- **Hide things instead of deleting** when you only need to take them down temporarily. Untick "Visible on public site" and Save.

11. Troubleshooting

Page looks broken or unstyled

Force-refresh: pull down on the page, or close and reopen the browser tab. If a website update was just deployed, your phone may be showing a cached older version.

Photo won't upload

Check the size — if your phone takes very high-resolution photos (over 5 MB each), drop the quality in your camera app, or use the phone's built-in compression. Most phone photos are fine.

Hamburger menu won't open

Refresh the page and try again. If the icon isn't responding, you may have an old cached version of the page — clear your browser's cache for the site.

I can't find a button or option

On a phone the admin hides some columns and groups some buttons. If a feature still seems missing, log in on a laptop and see if it's there — some less-used controls only appear on wide screens.

Something else is wrong

Take a screenshot (Power + Volume Down on most phones) and send it to the developer with a one-line note of what you were trying to do. That gets things fixed fastest.

You're all set. The whole admin really does fit in your pocket.
